Chemistry and Physics of Lipids, 52 (1990) 265—267
Elsevier Scientific Publishers Ireland Ltd.

Subject Index

Volume 52 (1990)

acidic phospholipids, vesicle fusion, monovalent cations, unsaturation, 199
acylcarnitine, hexagonal phase, lamellar phase, membrane structure, X-ray diffraction, 29
acyl migration, diacylglycerols, dipalmitoyl-*sn*-glycerol, vesicles, liposomes, 163
aminoethylphosphonic acid, *N*-methylaminoethylphosphonic acid, phosphonosphingolipids, molecular species, fast atom bombardment mass spectrometry, tandem mass spectrometry, 57
amphotericin B, antibiotic, vesicles, phosphatidylcholine, phosphatidylglycerol, 189
antibiotic, vesicles, amphotericin B, phosphatidylcholine, phosphatidylglycerol, 189
betaine lipid, ether lipid, NMR, MS, *Ochromonas*, 99
bilayer, phosphatidylcholine, liposomes, neutron scattering, 41
bilayer lipid membrane, permeability, phase transition, phosphatidic acid, electric field, 251
bile salt, solubilization, liposomes, mixed micelles, ultrafiltration, 111

capacitance fluctuations, dolichyl phosphate, phospholipid bilayer, ion transport, membrane capacitance, 151
cationic surfactant, dipalmitoylphosphatidylcholine, vesicle membrane, phase transition, water/membrane partition, 157
cerebroside, crystal structure, hydrogen bonding, conformation, molecular mechanics, 1
complex formation, Fourier transform infrared spectroscopy, phospholipids, photoacoustic, 11
conformation, cerebroside, crystal structure, hydrogen bonding, molecular mechanics, 1
conjugated double bond, trienoic long-chain base, longchain base, octadecasphinga-4,8,10-trienine, sphingosine, GC/MS, 171
cryoprotection, trehalose, liposomes, dehydration, sugars, glycerol, 139
crystal structure, cerebroside, hydrogen bonding, conformation, molecular mechanics, 1

dehydration, trehalose, liposomes, cryoprotection, sugars, glycerol, 139
deuterium, differential scanning calorimetry, H-bonding, hexagonal phase, phase transition, phosphatidylethanolamine, 227
diacylglycerol, surfactant, lung, dipalmitoyl phosphatidylcholine, fatty acids, oscillating bubble, 243
diacylglycerols, acyl migration, dipalmitoyl-*sn*-glycerol, vesicles, liposomes, 163
differential scanning calorimetry, deuterium, H-bonding, hexagonal phase, phase transition, phosphatidylethanolamine, 227
differential scanning calorimetry, phospholipids, sterols, ions, thermodynamic model, 129
differential scanning calorimetry, triglycerides, tripalmitin, polymorphism, X-ray diffraction, synchrotron radiation, 79
dipalmitoyl-*sn*-glycerol, acyl migration, diacylglycerols, vesicles, liposomes, 163
dipalmitoylphosphatidylcholine, vesicle membrane, phase transition, cationic surfactant, water/membrane partition, 157
dipalmitoyl phosphatidylcholine, surfactant, lung, diacylglycerol, fatty acids, oscillating bubble, 243
dolichyl phosphate, phospholipid bilayer, ion transport, membrane capacitance, capacitance fluctuations, 151

electrical capacitance, trehalose mycolate, water permeability, lipid bilayer, glycolipid, 259
electric field, bilayer lipid membrane, permeability, phase transition, phosphatidic acid, 251
electron spin resonance, 5-hydroxyeicosatetraenoic acid, 15-hydroxyeicosatetraenoic acid, phospholipids, 217
ethanol-membrane interaction,
ether lipid, betaine lipid, NMR, MS, *Ochromonas*, 99
excimer to monomer ratio, Fe-ascorbate peroxidation, phosphatidic acid, phospholipase D, synaptosomes, fluorescence polarization, 49

fast atom bombardment mass spectrometry, aminoethylphosphonic acid, *N*-methylaminoethylphosphonic acid, phosphonosphingolipids, molecular species, tandem mass spectrometry, 57
fatty acids, surfactant, lung, dipalmitoyl phosphatidylcholine, diacylglycerol, oscillating bubble, 243
Fe-ascorbate peroxidation, phosphatidic acid, phospholipase D, synaptosomes, excimer to monomer ratio, fluorescence polarization, 49
fluorescence polarization, Fe-ascorbate peroxidation, phosphatidic acid, phospholipase D, synaptosomes, excimer to monomer ratio, 49

fluorescence spectroscopy, low density lipoprotein, prenyl phospholipids, lipid fluidity, 207
Fourier transform infrared spectroscopy, phospholipids, photoacoustic, complex formation, 11

gangliosides, ganglioside derivatives, ganglioside aggregates, vesicles, light scattering, 231
ganglioside aggregates, gangliosides, ganglioside derivatives, vesicles, light scattering, 231
ganglioside derivatives, gangliosides, ganglioside aggregates, vesicles, light scattering, 231
GC/MS, trienoic long-chain base, longchain base, octadecasphinga-4,8,10-trienine, conjugated double bond, sphingosine, 171
glycerol, trehalose, liposomes, dehydration, cryoprotection, sugars, 139
glycolipid, trehalose mycolate, water permeability, electrical capacitance, lipid bilayer, 259

H-bonding, deuterium, differential scanning calorimetry, hexagonal phase, phase transition, phosphatidylethanolamine, 227
hexagonal phase, acylcarnitine, lamellar phase, membrane structure, X-ray diffraction, 29
hexagonal phase, deuterium, differential scanning calorimetry, H-bonding, phase transition, phosphatidylethanolamine, 227
hydrogen bonding, cerebroside, crystal structure, conformation, molecular mechanics, 1
5-hydroxyeicosatetraenoic acid, 15-hydroxyeicosatetraenoic acid, phospholipids, electron spin resonance, 217
15-hydroxyeicosatetraenoic acid, 5-hydroxyeicosatetraenoic acid, phospholipids, electron spin resonance, 217

ions, phospholipids, sterols, differential scanning calorimetry, thermodynamic model, 129
ion transport, dolichyl phosphate, phospholipid bilayer, membrane capacitance, capacitance fluctuations, 151

lamellar phase, acylcarnitine, hexagonal phase, membrane structure, X-ray diffraction, 29
light scattering, gangliosides, ganglioside derivatives, ganglioside aggregates, vesicles, 231
lipid-lipid lateral interactions, non-ideality parameter, phase diagram and phase transition, 69
lipid bilayer, trehalose mycolate, water permeability, electrical capacitance, glycolipid, 259
lipid fluidity, low density lipoprotein, prenyl phospholipids, fluorescence spectroscopy, 207
liposomes, acyl migration, diacylglycerols, dipalmitoyl-*sn*-glycerol, vesicles, 163
liposomes, phosphatidylcholine, bilayer, neutron scattering, 41
liposomes, solubilization, mixed micelles, bile salt, ultrafiltration, 111
liposomes, trehalose, dehydration, cryoprotection, sugars, glycerol, 139
longchain base, trienoic long-chain base, octadecasphinga-4,8,10-trienine, conjugated double bond, sphingosine, GC/MS, 171
low density lipoprotein, prenyl phospholipids, lipid fluidity, fluorescence spectroscopy, 207
lung, surfactant, dipalmitoyl phosphatidylcholine, diacylglycerol, fatty acids, oscillating bubble, 243

membrane capacitance, dolichyl phosphate, phospholipid bilayer, ion transport, capacitance fluctuations, 151
membrane structure, acylcarnitine, hexagonal phase, lamellar phase, X-ray diffraction, 29
mixed micelles, solubilization, liposomes, bile salt, ultrafiltration, 111
molecular mechanics, cerebroside, crystal structure, hydrogen bonding, conformation, 1
molecular species, aminoethylphosphonic acid, *N*-methylaminoethylphosphonic acid, phosphonosphingolipids, fast atom bombardment mass spectrometry, tandem mass spectrometry, 57
monovalent cations, acidic phospholipids, vesicle fusion, unsaturation, 199
MS, betaine lipid, ether lipid, NMR, *Ochromonas,* 99
N-methylaminoethylphosphonic acid, aminoethylphosphonic acid, phosphonosphingolipids, molecular species, fast atom bombardment mass spectrometry, tandem mass spectrometry, 57

neutron scattering, phosphatidylcholine, liposomes, bilayer, 41
NMR, betaine lipid, ether lipid, MS, *Ochromonas,* 99
non-ideality parameter, lipid-lipid lateral interactions, phase diagram and phase transition, 69

Ochromonas, betaine lipid, ether lipid, NMR, MS, 99
octadecasphinga-4,8,10-trienine, trienoic long-chain base, longchain base, conjugated double bond, sphingosine, GC/MS, 171
oscillating bubble, surfactant, lung, dipalmitoyl phosphatidylcholine, diacylglycerol, fatty acids, 243

permeability, bilayer lipid membrane, phase transition, phosphatidic acid, electric field, 251
phase diagram and phase transition, lipid-lipid lateral interactions, non-ideality parameter, 69
phase transition, bilayer lipid membrane, permeability, phosphatidic acid, electric field, 251
phase transition, deuterium, differential scanning calorimetry, H-bonding, hexagonal phase, phosphatidylethanolamine, 227
phase transition, dipalmitoylphosphatidylcholine, vesicle membrane, cationic surfactant, water/membrane partition, 157
phosphatidic acid, bilayer lipid membrane, permeability, phase transition, electric field, 251

phosphatidic acid, Fe-ascorbate peroxidation, phospholipase D, synaptosomes, excimer to monomer ratio, fluorescence polarization, 49
phosphatidylcholine, antibiotic, vesicles, amphotericin B, phosphatidylglycerol, 189
phosphatidylcholine, liposomes, bilayer, neutron scattering, 41
phosphatidylethanolamine, deuterium, differential scanning calorimetry, H-bonding, hexagonal phase, phase transition, 227
phosphatidylglycerol, antibiotics, vesicles, amphotericin B, phosphatidylcholine, 189
phospholipase D, Fe-ascorbate peroxidation, phosphatidic acid, synaptosomes, excimer to monomer ratio, fluorescence polarization, 49
phospholipids, Fourier transform infrared spectroscopy, photoacoustic, complex formation, 11
phospholipids, 5-hydroxyeicosatetraenoic acid, 15-hydroxyeicosatetraenoic acid, electron spin resonance, 217
phospholipids, sterols, ions, differential scanning calorimetry, thermodynamic model, 129
phospholipid bilayer, dolichyl phosphate, ion transport, membrane capacitance, capacitance fluctuations, 151
phosphonosphingolipids, aminoethylphosphonic acid, *N*-methylaminoethylphosphonic acid, molecular species, fast atom bombardment mass spectrometry, tandem mass spectrometry, 57
photoacoustic, Fourier transform infrared spectroscopy, phospholipids, complex formation, 11
polymorphism, triglycerides, tripalmitin, X-ray diffraction, synchrotron radiation, differential scanning calorimetry, 79
prenyl phospholipids, low density lipoprotein, lipid fluidity, fluorescence spectroscopy, 207

solubilization, liposomes, mixed micelles, bile salt, ultrafiltration, 111
sphingosine, trienoic long-chain base, longchain base, octadecasphinga-4,8,10-trienine, conjugated double bond, GC/MS, 171
sterols, phospholipids, ions, differential scanning calorimetry, thermodynamic model, 129
sugars, trehalose, liposomes, dehydration, cryoprotection, glycerol, 139
surfactant, lung, dipalmitoyl phosphatidylcholine, diacylglycerol, fatty acids, oscillating bubble, 243
synaptosomes, Fe-ascorbate peroxidation, phosphatidic acid, phospholipase D, excimer to monomer ratio, fluorescence polarization, 49
synchrotron radiation, triglycerides, tripalmitin, polymorphism, X-ray diffraction, differential scanning calorimetry, 79

tandem mass spectrometry, aminoethylphosphonic acid, *N*-methylaminoethylphosphonic acid, phosphonosphingolipids, molecular species, fast atom bombardment mass spectrometry, 57
thermodynamic model, phospholipids, sterols, ions, differential scanning calorimetry, 129
trehalose, liposomes, dehydration, cryoprotection, sugars, glycerol, 139
trehalose mycolate, water permeability, electrical capacitance, lipid bilayer, glycolipid, 259
trienoic long-chain base, longchain base, octadecasphinga-4,8,10-trienine, conjugated double bond, sphingosine, GC/MS, 171
triglycerides, tripalmitin, polymorphism, X-ray diffraction, synchrotron radiation, differential scanning calorimetry, 79
tripalmitin, triglycerides, polymorphism, X-ray diffraction, synchrotron radiation, differential scanning calorimetry, 79

ultrafiltration, solubilization, liposomes, mixed micelles, bile salt, 111
unsaturation, acidic phospholipids, vesicle fusion, monovalent cations, 199

vesicles, acyl migration, diacylglycerols, dipalmitoyl-*sn*-glycerol, liposomes, 163
vesicle, antibiotic, amphotericin B, phosphatidylcholine, phosphatidylglycerol, 189
vesicles, gangliosides, ganglioside derivatives, ganglioside aggregates, light scattering, 231
vesicle fusion, acidic phospholipids, monovalent cations, unsaturation, 199
vesicle membrane, dipalmitoylphosphatidylcholine, phase transition, cationic surfactant, water/membrane partition, 157

water/membrane partition, dipalmitoylphosphatidylcholine, vesicle membrane, phase transition, cationic surfactant, 157
water permeability, trehalose mycolate, electrical capacitance, lipid bilayer, glycolipid, 259

X-ray diffraction, acylcarnitine, hexagonal phase, lamellar phase, membrane structure, 29
X-ray diffraction, triglycerides, tripalmitin, polymorphism, synchrotron radiation, differential scanning calorimetry, 79
